

## Through the Lens

Name: \_\_\_\_\_

Date: \_\_\_\_\_

### Instructions:

- Each pair of students will receive one magnifying glass.
- Choose a few objects from around the classroom such as paper, pencils, rulers, or even something from your bag!
- Students will take turns moving the magnifying glass closer to and farther from each object, while holding it still momentarily at each distance.

### Buddy Discussion:

**Each time they try a new distance, one student holds the magnifying glass, and the other asks:**

- “Can you still see the whole thing when it’s really close?”
- “Does it look bigger or smaller when you move the lens back?”
- “What new details can you notice?”

**Switch roles after each object. You’ll be both the observer and the guide!**
